1. Summary

This cartridge integrates *Bambuser LiveShopping* with *Salesforce Commerce Cloud's Storefront Reference Architecture* based eCommerce websites.

Bambuser allows Salesforce users to easily implement Live Video Shopping on their eCommerce sites. By injecting the Bambuser embed and tracking scripts into a client's Salesforce eCommerce platform, you can offer a dynamic, engaging live video shopping experience - increasing engagement and conversion across your store. The Bambuser Live Video Shopping is a white-label experience where retailers control both brand narrative (design and customer journey) and data (consumer and transactional). Viewers can both watch and shop in the shows while live and even after the show has ended. After a show has ended it can be edited directly in the Bambuser platform then linked to your site. The average viewing time for a Bambuser live shopping show is 9,20 minutes with a 22% add-to-cart and results in higher sales with fewer returns. Bambuser's Live Video Shopping allows retailers to speak directly with consumers without coming in between that relationship. Bambuser is also able to support Live Video Shopping with education and training in best practices for both content creation and live show production based upon data driven insights and the unique Bambuser expertise. Our expert teams train, onboard and make sure the retailer has all the necessary knowledge and tools to succeed. During live shows Bambuser can also offer monitoring and dedicated support services.

Bambuser Products

Bambuser Player API

Cart Integration

Conversion Tracker

It contains the core functionality required for integration:

- Loading and initialize the Player via *Bambuser Player API*
- Provides the Player with Product Data
- Cart Integration, with player cart and SFCC cart
- Floating Action Button, present on all subpages of the website to see the player on whole website.
- Conversion Tracker to send placed order data to Bambuser

It also implements 2 examples of how to integrate the Live Shopping experience into a storefront:

- A flexible content rendering template and a demonstrative Sample Content/Slot configuration data to link a stream to the SFRA landing page.
- A stream overview page that fetches available streams from the *Bambuser* – *only for merchants use*

2. Component Overview

Functional Overview

The functional base of the cartridge is 2MBs of code and settings, file types are 96% JavaScript 3% SCSS 1% other (xml, isml, etc.)

Bambuser cartridge allows a Salesforce Commerce Cloud merchant to integrate Bambuser Live Shopping experience with its functionalities like floating action button, cart integration, player.

Cartridge has these functionalities.

- Bambuser Player with player's button configuration
- Floating action button (optional)
- Conversion Tracker (optional)
- Cart Integration (optional)

The example content provided is in the default locale and written in English.
The cartridge functionality is compatible with all locales.

Use Cases

Integrating Bambuser Live Shopping Streams into a Salesforce Commerce Cloud's SFRA based eCommerce site.

Limitations, Constraints

There are known limitations around the variation selections available when cart integration is used and only 2 variations can be set up 1) color and 2) size. If a client has any other variations, then this will not be handled smoothly, however adding more functionality to better handle other variation or more variation types are not included in this statement of work.

Video and channel are managed in the Bambuser portal and handled by the merchant.

Compatibility

Tested with

SFRA 6.3.0

COMPATIBILITY MODES 21.7

Privacy, Payment

The cartridge does not store or access customer data.

Anonymous data might be sent to Bambuser for analytics purposes after purchase. (order total, products)

Cartridge integrates Bambuser Live Shopping, which has a separate privacy policy.

3. Implementation Guide

Setup of Business Manager

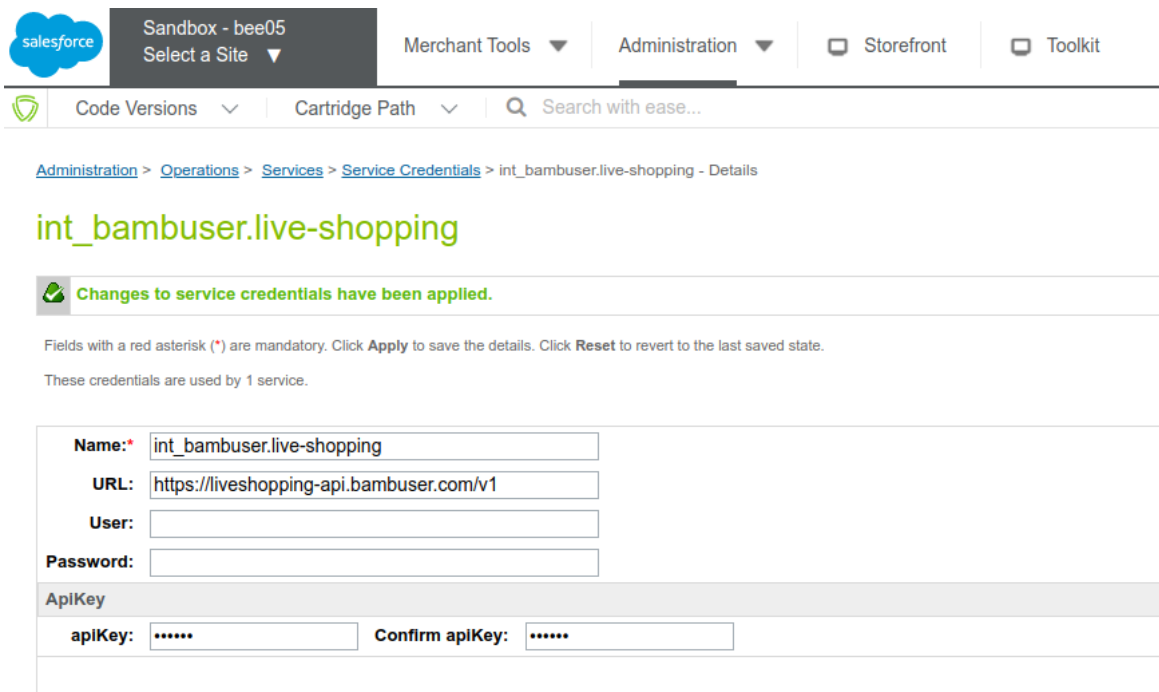

- Run \$ yarn install; yarn run build in the repo route directory to compile the frontend client. Run \$ yarn run build:dev for development purposes.
- Add this cartridge to a SFRA-based project as outlined https://documentation.b2c.commercecloud.salesforce.com/DOC2/topic/com.demandware.dochelp/content/b2c_commerce/topics/sfra/b2c_sfra_features_and_comps.html
- Include it in the cartridge path as outlined https://documentation.b2c.commercecloud.salesforce.com/DOC2/topic/com.demandware.dochelp/content/b2c_commerce/topics/sfra/b2c_sfra_overview.html.
- Import Metadata (zip) from Administration -> Site Import Export Section

Configuration

Detailed configuration steps are available on User Guide on section 6.

Different Configuration steps are required for the 2 provided examples.

- **Stream overview page:** add the Bambuser Live Shopping **API Key** provided by Bambuser Customer Support to the service credential

The screenshot shows the Salesforce Commerce Cloud Administration interface. The top navigation bar includes the Salesforce logo, a dropdown for 'Sandbox - bee05', and links for 'Merchant Tools', 'Administration', 'Storefront', and 'Toolkit'. Below this is a breadcrumb trail: 'Administration > Operations > Services > Service Credentials > int_bambuser.live-shopping - Details'. The main heading is 'int_bambuser.live-shopping'. A green message box states 'Changes to service credentials have been applied.' Below this, a note indicates that fields with a red asterisk (*) are mandatory and provides instructions to click 'Apply' to save or 'Reset' to revert. It also notes that these credentials are used by 1 service. The form contains the following fields: 'Name:*' (int_bambuser.live-shopping), 'URL:' (https://liveshopping-api.bambuser.com/v1), 'User:' (empty), 'Password:' (empty), and 'ApiKey' (a section with 'apiKey:' and 'Confirm apiKey:' fields, both masked with dots).

- **Banner Asset:**
 - Import the asset and slot configuration in `content_sample/`
 - Activate slot configuration

[Merchant Tools](#) > [Online Marketing](#) > [Content Slots](#) > Slot 'home-main-m' - (Global)

Slot Configurations

Slot Configuration(s)						
Main home page slot: Click New to create a new slot configuration, and click a specific slot configuration to edit that slot configuration. To delete a specific slot configuration, click the red deletion icon. To copy a specific slot configuration, select the slot configuration and click the Copy button.						
ID	Description	Default	Status	Type	Preview	
homepage-main-image (default)	Homepage main home page image	True	Inactive	Content Asset		
homepage-main-bambuser	Main Banner with Bambuser stream trigger example	False	Active	Content Asset		

- Add the ID of the Bambuser Stream to be opened to the `home-main-bambuser-trigger` content asset

Bambuser

Bambuser Stream Id:

In Business Manager the merchant has a configuration page, where the functionality fits the business rules and specifications.

Configurations should be populated to use Bambuser Live Shopping.

To access, the merchant should click on: BM >Merchant Tools >Site Preferences >Custom Preferences > Bambuser

This page allows you to configure all settings explained below:

- Enables / Disables the Bambuser Integration
- Enable the Cart Integration - When disabled, the product in bambuser player will act as a link, instead of an opening list of variations
- LiveShopping embed script URL - URL of bambuser liveshopping frontend embed script.
- Toggles the stream overview page (Bambuser-Overview) - When not active, shows error when controller is called
- image size to pass to bambuser - Size of images passed to bambuser frontend
- Enable Floating Action Button - Enable Live Button on the storefront
- Pages not displaying the floating action button - Pages where the floating action button should not be displayed
- Floating action button Script URL
- Floating Action Button ID
- Enable Conversion Tracker - Track products added to cart from the Bambuser player
- Conversion Tracker URL - Conversion Tracker URL for GLOBAL SERVERS and EUROPEAN SERVERS
- Bambuser Miniplayer Dismiss Button Configuration - List of available behaviors to configure the dismiss button
- Bambuser Miniplayer Product Button Configuration - List of available behaviors to configure the product button
- Bambuser Miniplayer Checkout Button Configuration - List of available behaviors to configure the checkout button
- Pages where the Miniplayer is not displayed

The screenshot shows the 'bambuser' configuration page in the RefArch system. The page has a header with navigation tabs: 'RefArch', 'Merchant Tools', 'Administration', 'Storefront', and 'ToolKit'. Below the header, there's a search bar and a breadcrumb trail: 'Merchant Tools / Site Preferences / Custom Site Preference Groups / bambuser'. The main content area is a table with columns 'Name', 'Value', and 'Default Value'. The table lists several settings for the 'bambuser' instance type, which is currently set to 'Sandbox'. The settings include:

Name	Value	Default Value
Enables / Disables the Bambuser Integration (bambuser_enabled)	Yes	No
Enable the Cart Integration (bambuser_cart_integration) When disabled, the product in bambuser player will act as a link, instead of an opening list of variations	Yes	No
LiveShopping embed script URL (bambuser_liveshopping_scripturl) (String) URL of bambuser liveshopping frontend embed script.	https://icx-embed.bambuser.com/bambuser/embed.js	https://icx-embed.bambuser.com/bambuser/embed.js
Toggles the stream overview page (Bambuser-Overview) (bambuser_show_overview) When not active, shows error when controller is called	No	Yes

Each row has an 'Edit Across Sites' link on the right. At the top right of the table, there are buttons for 'Cancel', 'Apply to Other Sites', and 'Save'. The table also has a search bar and a pagination indicator showing '1-15 of 15'.

Image size to pass to bambuser (bambuser_image_size) (String) Size of images passed to bambuser frontend	medium	medium	Edit Across Sites
Enable Floating Action Button (bambuser_floating_action_button) (Enable Live Button on the storefront)	Yes	No	Edit Across Sites
Pages not displaying the floating action button (bambuser_pkcp_pages_fab) Pages where the floating action button should not be displayed	Add		Edit Across Sites
Floating action button Script URL (bambuser_fab_widget_scripturl) (String)	https://icw-widgets.bambuser.com/embed.js	https://icw-widgets.bambuser.com/embed.js	Edit Across Sites
Floating Action Button ID (bambuser_fab_widget_id) (String)	z4kk1Avt0mevndRcUB4		Edit Across Sites
Enable Conversion Tracker (bambuser_conversion_tracker)	Yes	Yes	Edit Across Sites

Conversion Tracker URL (bambuser_conversion_tracker_url) Conversion Tracker URL for GLOBAL SERVERS and EUROPEAN SERVERS	GLOBAL SERVERS (https://cdn.liveshopping.bambuser.com/metrics/bambuser.min.js)	GLOBAL SERVERS	Edit Across Sites
Bambuser Miniplayer Dismiss Button Configuration (bambuser_dismiss_miniplayer) List of available behaviors to configure the dismiss button	None	Player Button Minimize	Edit Across Sites
Bambuser Miniplayer Product Button Configuration (bambuser_product_miniplayer) List of available behaviors to configure the product button	None	Player Button Auto	Edit Across Sites
Bambuser Miniplayer Checkout Button Configuration (bambuser_checkout_miniplayer) List of available behaviors to configure the checkout button	No Display (no_display)	Player Button Minimize	Edit Across Sites
Pages where the Miniplayer is not displayed (bambuser_pkcp_pages_miniplayer)	Add		Edit Across Sites

© 2023 Salesforce, Inc. All Rights Reserved. RelArch Time Zone: Coordinated Universal Time Instance Time Zone: Eastern Standard Time Version: 23.1 Last Updated: Dec 6, 2022 (Compatibility Mode: 22.7)

Custom Code

The cartridge works as-is without further code modification when integrating with SFRA.

Integrating the cartridge with a customized store will likely require some code adjustments.

External Interfaces

Frontend: Loads and interfaces with the bambuser liveshopping SDK

Backend: Bambuser LiveShopping API via Service Framework

Firewall Requirements

None.

4. Testing

Unit Tests

In order to run the unit test the following actions are needed:

- execute yarn install (if it was not already done)
- execute yarn run test (this will run both unit and integration tests so please refer to below to populate the necessary fields)

Integration Tests

In order to run the integration test the following actions are needed:

- Please replace the siteID and hostname with your ones on it.config.js under test/integration folder
- execute yarn install (if it was not already done)
- execute yarn run test:integration

5. Operations, Maintenance

Data Storage

None by the integration cartridge.

For information on the Bambuser Live Shopping Data storage policy, please refer to the Bambuser Live Shopping Documentation

Availability

Please refer to the Bambuser Live Shopping documentation for information on service availability.

Failover/Recovery Process

The frontend client will fail silently if the Bambuser does not load.

All other failures are handled via the Bambuser, please refer to the relevant documentation.

Support

support@bambuser.com

6. User Guide

Introduction

Bambuser allows Salesforce users to easily implement Live Video Shopping on their eCommerce sites. By injecting the **Bambuser** embed and tracking scripts into a client's Salesforce eCommerce platform, you can offer a dynamic, engaging live video shopping experience - increasing engagement and conversion across your store.

The **Bambuser** Live Video Shopping is a white-label experience where retailers control both brand narrative (design and customer journey) and data (consumer and transactional). Viewers can both watch and shop in the shows while live and even after the show has ended. After a show has ended it can be edited directly in the **Bambuser** platform then linked to your site. The average viewing time for a **Bambuser** live shopping show is 9,20 minutes with a 22% add-to-cart and results in higher sales with fewer returns. **Bambuser's** Live Video Shopping allows retailers to speak directly with consumers without coming in between that relationship.

Bambuser is also able to support Live Video Shopping with education and training in best practices for both content creation and live show production based upon data driven insights and the unique

Bambuser expertise. Our expert teams train, onboard and make sure the retailer has all the necessary knowledge and tools to succeed. During live shows **Bambuser** can also offer monitoring and dedicated support services.

Overview

Bambuser has an existing cartridge that was certified in 2020 and this SOW is to build and improve on what is already available in Bambuser cartridge. This page documents the storefront components that will be added to the existing Bambuser cartridge.

Cartridge enhancements will focus on the Bambuser 1-many implementations. OSF has no ability to change the styling of:

- Product section (modal)
- Mini-player/Player

Those are controlled by the Bambuser - directly handled by the client and Bambuser.

There are known limitations around the variation selections available when cart integration is used and only 2 variations can be set up 1) color and 2) size. If a client has any other variations, then this will not be handled smoothly, however adding more functionality to better handle other variation or more variation types are not included in this statement of work.

Video and channel are managed in the Bambuser portal and handled by the merchant.

The SFCC BM will be extended to allow management the following functionalities on the SFCC Storefront:

- Bambuser integration - enable/disable
- Cart integration - enable/disable
- Mini-player - enable/disable
- Conversion tracker - enable/disable
- The SFCC BM **Site Preference section** will be extended

Business Manager – Configurations

In Business Manager the merchant has a configuration page, where the functionality fits the business rules and specifications.

To access, the merchant should click on: **BM >Merchant Tools >Site Preferences >Custom Preferences > bambuser**

bambuser

Instance Type: Sandbox

Enable Conversion Tracker (bambuser_conversion_tracker)	Yes	Yes	Edit Across Sites

The screenshot shows a configuration page for Bambuser. It includes several sections with dropdown menus and text labels:

- Conversion Tracker URL:** A dropdown menu set to "GLOBAL SERVERS (https://cdn.liveshopping.bambuser.com/metrics/bambuser.min.js)". Below it, text indicates "Conversion Tracker URL for GLOBAL SERVERS and EUROPEAN SERVERS".
- Bambuser Miniplayer Dismiss Button Configuration:** A dropdown menu set to "None". Below it, text indicates "List of available behaviors to configure the dismiss button".
- Bambuser Miniplayer Product Button Configuration:** A dropdown menu set to "None". Below it, text indicates "List of available behaviors to configure the product button".
- Bambuser Miniplayer Checkout Button Configuration:** A dropdown menu set to "No Display (no_display)". Below it, text indicates "List of available behaviors to configure the checkout button".
- Pages where the Miniplayer is not displayed:** A text input field with a "Add" button.

At the bottom, there is a footer with copyright information: "© 2023 Salesforce, Inc. All Rights Reserved." and a version note: "RelArch Time Zone: Coordinated Universal Time (Instance Time Zone: Eastern Standard Time / Version: 23.1 Last Updated: Dec 6, 2022 (Compatibility Mode: 22.7))".

This page allows you to configure all settings explained below:

- **Enables / Disables the Bambuser Integration**
- **Enable the Cart Integration** - When disabled, the product in bambuser player will act as a link, instead of an opening list of variations
- **LiveShopping embed script URL** - URL of bambuser liveshopping frontend embed script.
- **Toggles the stream overview page (Bambuser-Overview)** - When not active, shows error when controller is called
- **image size to pass to bambuser** - Size of images passed to bambuser frontend
- **Enable Floating Action Button** - Enable Live Button on the storefront
- **Pages not displaying the floating action button** - Pages where the floating action button should not be displayed
- **Floating action button Script URL**
- **Floating Action Button ID**
- **Enable Conversion Tracker** - Track products added to cart from the Bambuser player

- **Conversion Tracker URL - Conversion Tracker URL for GLOBAL SERVERS and EUROPEAN SERVERS**

This close-up shows the "Conversion Tracker URL" dropdown menu. The menu is open, displaying three options:

- GLOBAL SERVERS (https://cdn.liveshopping.bambuser.com/metrics/bambuser.min.js)
- None
- EUROPEAN SERVERS (https://cdn.liveshopping.bambuser.com/metrics/bambuser.min.js)

The "None" option is currently selected. To the right of the dropdown, the text "GLOBAL SERVERS" is visible, and further right is a link that says "Edit Across Sites".

- **Bambuser Miniplayer Dismiss Button Configuration** - List of available behaviors to configure the dismiss button

Note: In order to Enable the miniplayer the dismiss configuration should be set on MINIMIZE.

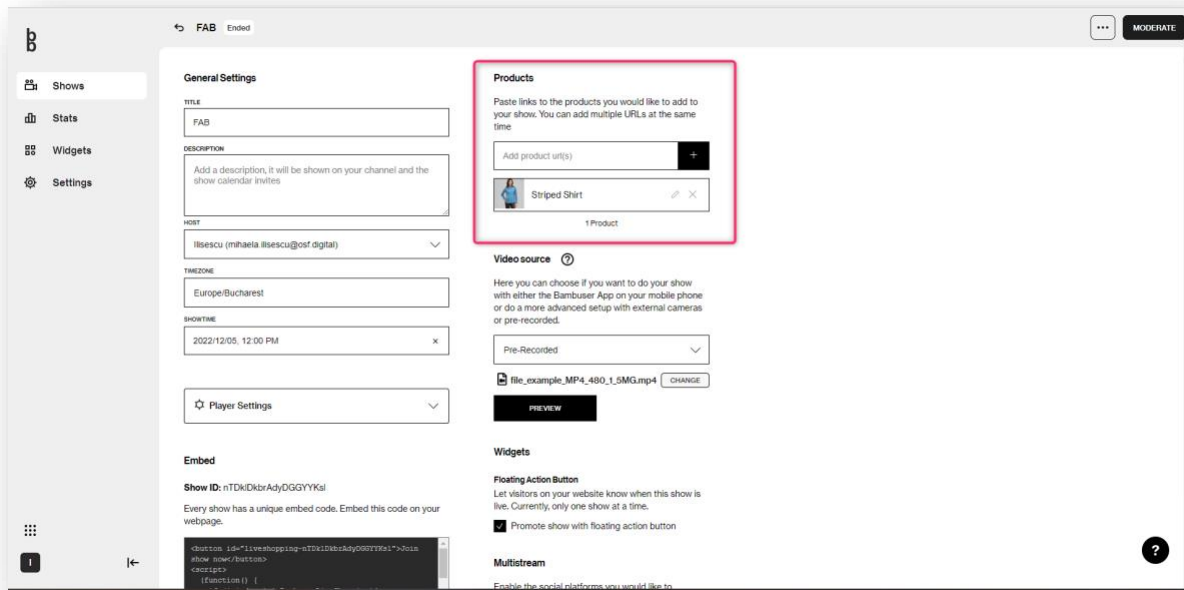

- **Bambuser Miniplayer Product Button Configuration** - List of available behaviors to configure the product button

- **Bambuser Miniplayer Checkout Button Configuration** - List of available behaviors to configure the checkout button

- **Pages where the Miniplayer is not displayed**

Shop products - cart enabled expanded view

Product are added to the video setup in the Bambuser website. These are added by adding the product URL to the Bambuser dashboard.

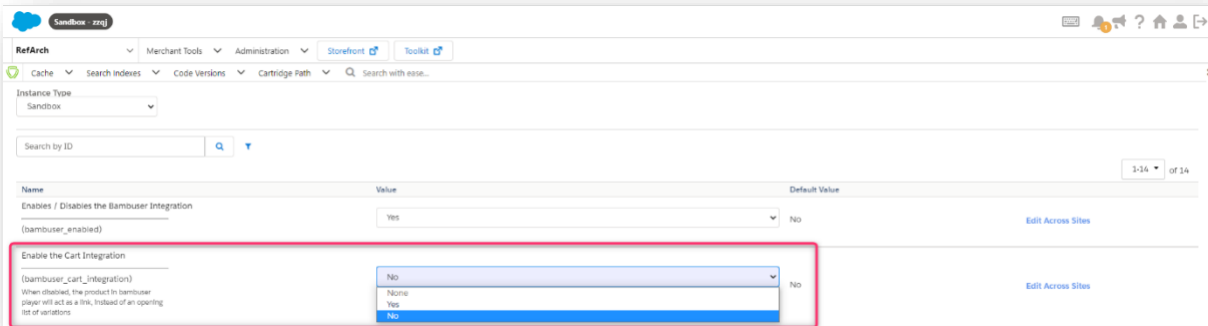

Product pane has 2 variations:

- Cart integration not enabled (this is existing functionality and will not change)
- Cart integration enabled.

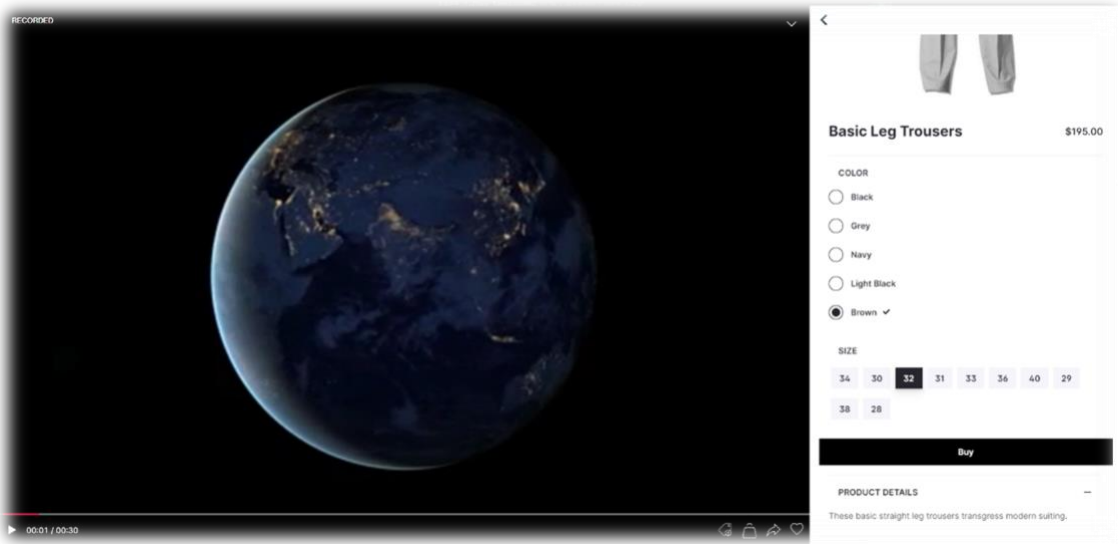

The cart integration can be turned on/off in Site Preferences.

Go to **Merchant Tools > Site Preferences > Custom Preferences > bambuser**

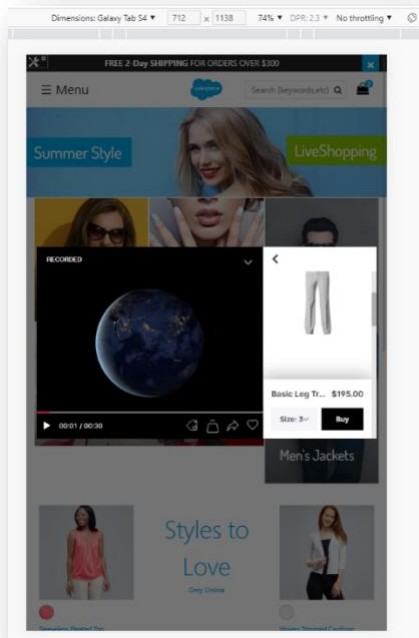

If cart integration is enabled, then this is displayed when a user clicks/taps on a product tile in the shop product list. Check is done for product availability when the Player loads product information.

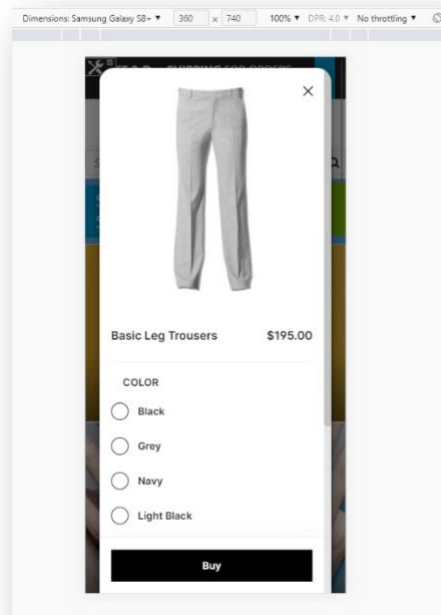

Desktop:

Tablet:

Mobile:

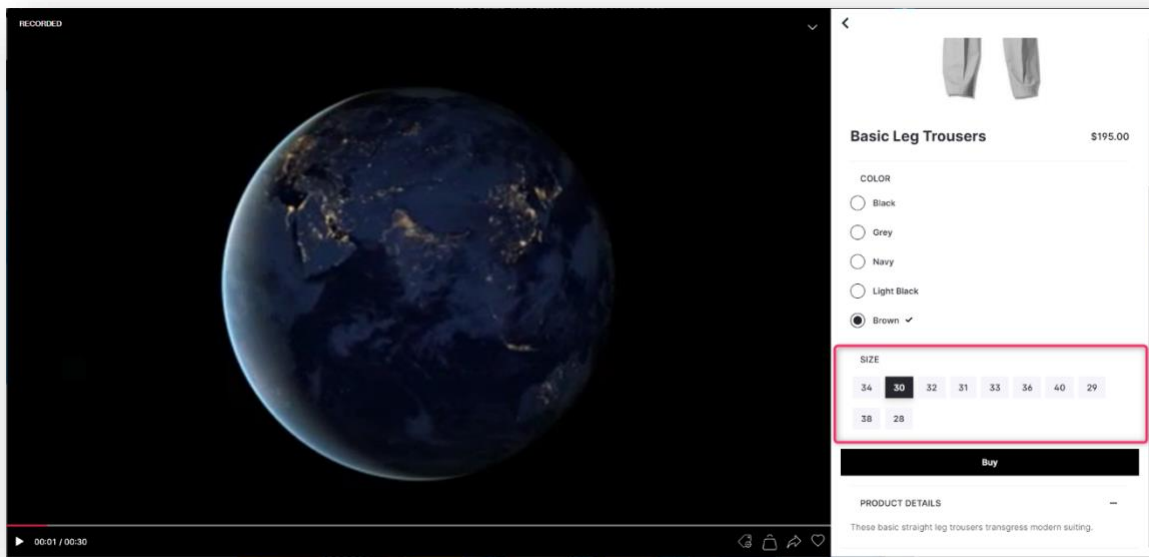

Product description is displayed left aligned in the space below the product image with the price right aligned in the space, vertically aligned with the product description.

Price is retrieved from product price model when hydrating the player. If there is a sales price this would also be displayed with the list price struck through.

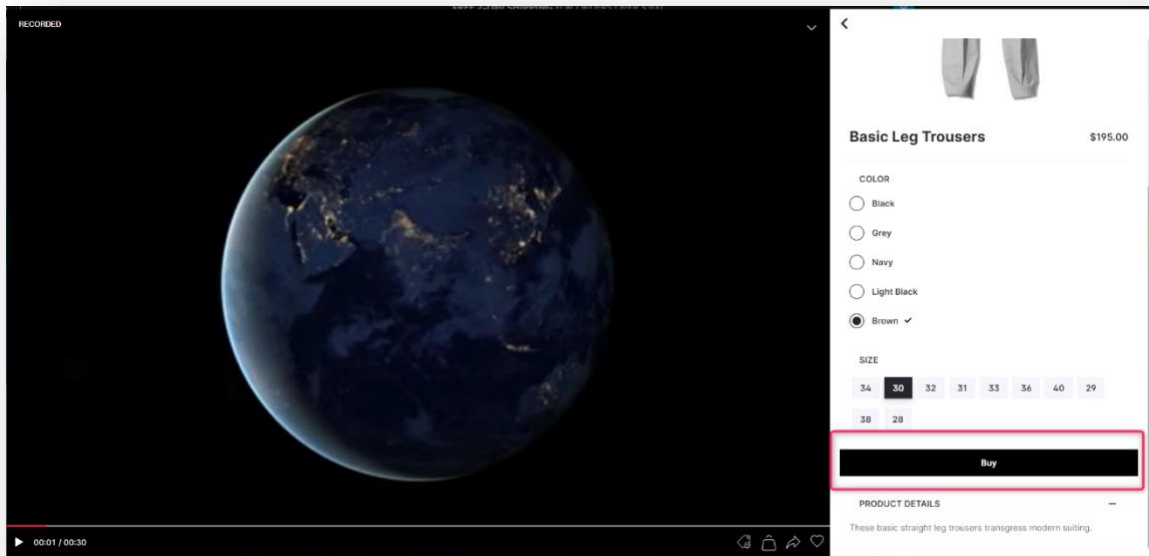

Clicking/Tapping a radio button will change the product variant selection to the selected color and update the image to display the image for the selected color.

Sizes are displayed in 1 row from left to right and if more options are available this can flow into as many rows as is required.

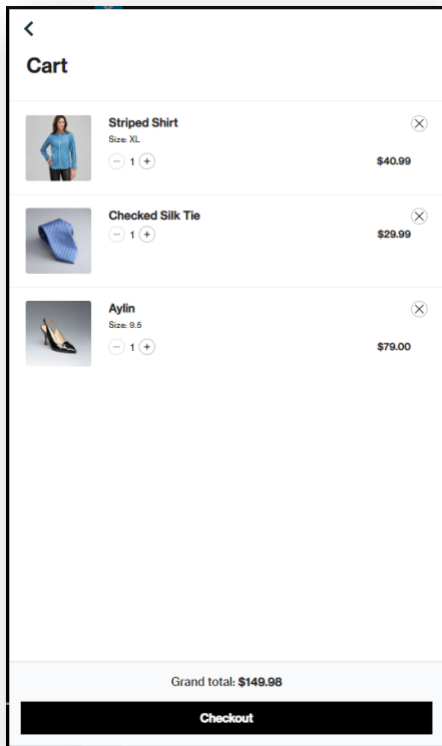

Buy button is displayed centered but stretched to fill most of the available space. Clicking/tapping when all available variation selections have been made will add the product selected to the cart.

Cart Specifications

When cart integration is enabled an option to display cart in the modal is available. The pane is displayed when user selects the cart icon on the main player.

Items that are in the Bambuser cart when closed will be added to the SFCC cart. These items will remain in the SFCC cart and when the video is reopened these will not be displayed in the Bambuser video cart again.

Clicking the Checkout button, the module closes and the user is redirected to the shopping cart page where they can continue to make the purchase.

The miniplayer works on any checkout page, with the related settings in BM.

Specifications for the cart:

- Product image thumbnail
- Product description and size
- Number of items add/decrease items. The discount item becomes inactive when there is only 1 item in the cart
- The price of the displayed product
- Remove the item from the basket displayed at the top right of the board.

If no products have been added to the cart, the displayed message is left-aligned in the space below the "No products in cart" keyline.

The cart can be collapsed so that the customer can continue shopping from the list of products.

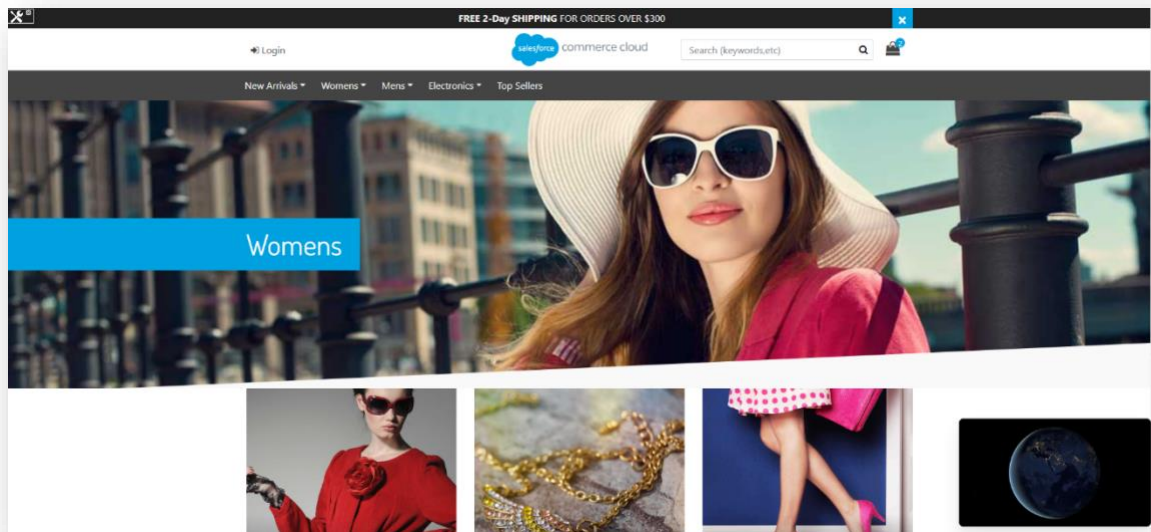

Miniplayer

Miniplayer is the minimized version of the video player. Whether the miniplayer is available or not on the **Storefront** should be configurable in the **BM**.

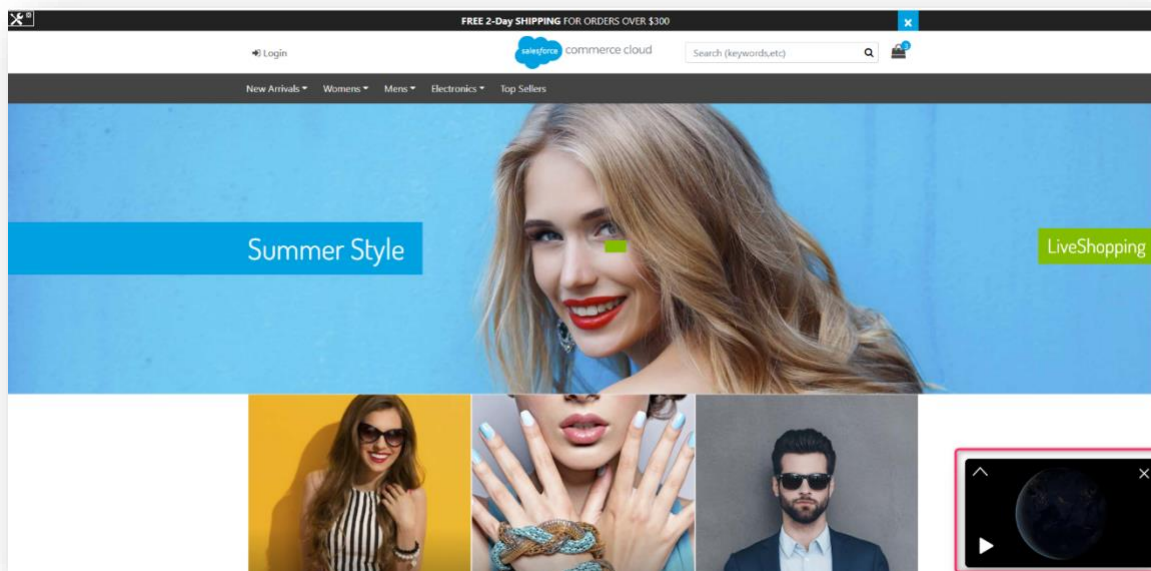

The miniplayer is displayed on all pages except those listed in the **BM** configuration, even when a user navigates to a different page on the site.

Where the miniplayer is displayed (positioning on the screen ie top left/bottom right) is determined by the configuration in the Bambuser dashboard.

Category landing page:

Where the miniplayer is displayed (positioning on the screen i.e. top left/bottom right) is determined by the configuration in the Bambuser dashboard.

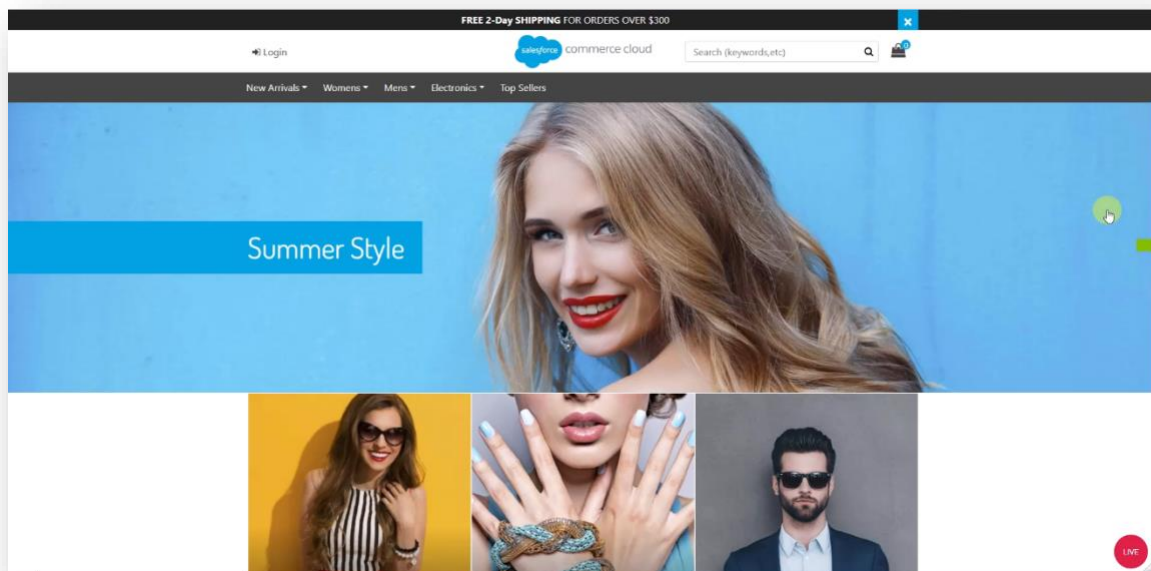

It has minimal controls available; chat and shop product panes are only available in full video mode. To access these features the user will need to maximize the modal. Maximizing the modal work as expected even if the user has navigated away from the video landing page/original page that the video was enabled on.

Miniplayer video controls are limited to play/pause, maximize, and close. When the customer reopens the video later, the items will still be in the SFCC cart, but will not be added back to the Bambuser video cart.

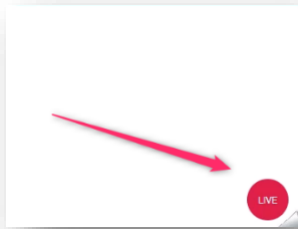

Floating action button

The floating action button is a mini window that sits on the site and invites browsers to join the current live broadcasts. It is displayed when and where it is configured to be displayed in the Bambuser dashboard.

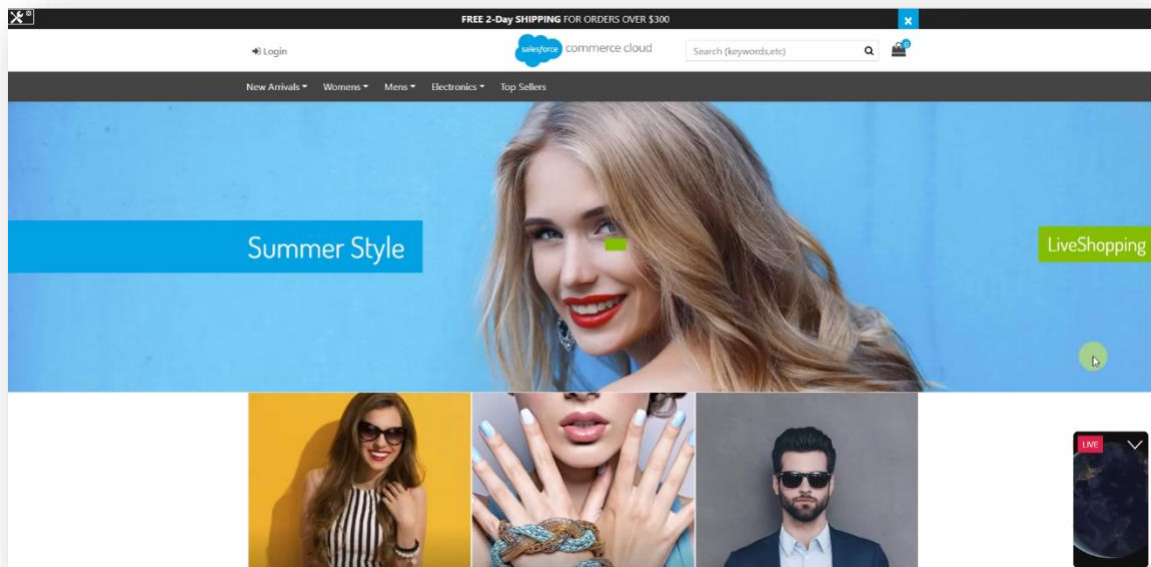

Floating action button is available on all pages except those explicitly listed in the BM and is displayed in a similar way to the miniplayer.

In BM the merchant can set the pages where the floating action button should not be displayed or if it will be displayed or not in the storefront.

Clicking/Tapping the Floating Action button will open/display the video player.

FAB has its own configuration. If the cart integration is enabled, then it is displayed when a user clicks/taps on a product in the store's product list.
Product availability is checked when the Player uploads product information.

7. Known Issues

Currently there is no known issues.

8. Release History

Version	Date	Changes
20.1.1	2018-09-25	Initial release
22.1.0	2022-12-16	Updated version with new functionalities.
24.1.0	2024-01-15	Updated to Node 18 support and dependency packages, removed unnecessary scripts
