Introduction

This document describes the Globale Settings Job as part of the default/basic functionality of the Global-e SFCC cartridge. Globale Settings Job pulls data from the Global-E side and stores it in SFCC custom objects.

Job Steps

- AppSettings - Loads cached data from Global-e API ./Browsing/AppSettings and ./Browsing/AppVersion.
- Countries - Loads cached data from Global-e API ./Browsing/Countries.
- CountryCoefficients - Loads cached data from Global-e API ./Browsing/CountryCoefficients, ./Browsing/CountryCoefficients.
- Cultures - Loads cached data from Global-e API ./Browsing/LocationsDefaultCulturesList.
- Currencies - Loads cached data from Global-e API ./Browsing/Currencies.
- CurrencyRates - Loads cached data from Global-e API ./Browsing/CurrencyRates.
- RoundingRules - Loads cached data from Global-e API ./Browsing/RoundingRules.
- ActiveHubDetails - Loads cached data from Global-e API ./Browsing/ActiveHubDetails.
- GlobaleGenerateCachePriceBooksXML - generates caching price books XML.
- GlobaleImportPriceBook - imports caching price books XML to the system.
- InvalidateCache - Invalidates SFCC page cache.
